

Joint-fit numerical-search performance

A Joint-fit objective landscapes

2 selected primary-family pairs, each with 500 numerical starts; the retained lowest objective is highlighted

B Joint-search diagnostics by warm-start pair

Flags, codes, numerical-start spread, and bounds describe search behavior. They are not posterior uncertainty or biological replication.

	Starts	DEoptim flag	Iterations	Selected local step	Near-optimal starts	Selected at bounds
C01	500	500/500	26-95/1000	not accepted; code 52	500 <=1% 500 <=5%	2/20
C02	500	500/500	26-45/1000	not accepted; code 52	500 <=1% 500 <=5%	1/20
