

A. In vivo cohort dynamics and terminal ploidy

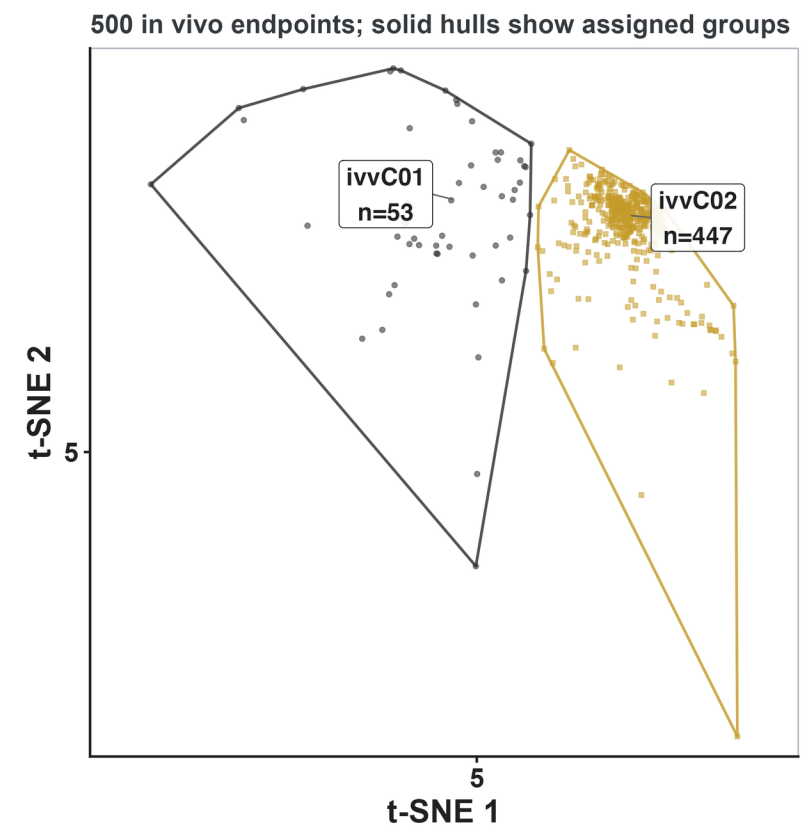

B. Oxygen-dependent parameter-ploidy landscape

Blue/red indicates association with lower/higher continuous dominant mean ploidy. Upper blue: 500 endpoints; green: seed25. Lower gray: configured fitting range; black: initial value. Shared log10 axis; tick 0 is a dedicated zero-bound position.

C. Exploratory fitted-endpoint landscape

D. Top six cluster-separating fitted parameters
